# FORMARIS**Furniture**

High quality upholstery pattern digitization

Formaris **Furniture**

Quickly develop pattern pieces and all production configurations, adapted to fabric or leather upholstery constraints, with Formaris Furniture. Perfectly suited for production of customized and modular furniture, this product development and industrialization solution accelerates the entire product development process, allowing you to decrease lead-time and quickly fill customer orders.
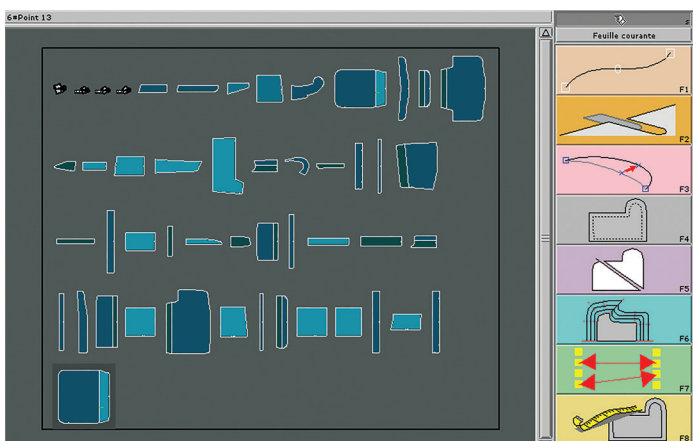

Improve the quality
of finished products

Perform accurate quality control before production begins.

- Ensure production repeatability with digitized cardboard templates, as well as verification and adjustment of imported digital patterns.

- Verify fit and measure patterns with virtual simulation of piece assembly.

- Achieve consistent finished product quality with definition of pattern matching rules and leather quality zones.

- Share accurate, up-to-date model information with collaborators.

Furniture

FORMARIS®

Meet increasing demand **for product personalization**

Quickly and efficiently create personalized and customized upholstered furniture.

- Quickly define all the requested model configurations for production, using data from a master model.

- Group collections of pieces by material characteristics, quantity, nesting rules and cutting organization.

- Prepare and organize large quantities of pattern data for marker making and automatic cutting.

Reduce product **development time**

Easily design and adjust patterns for a perfect fit.

- Develop an entire range of upholstery configurations using data from a master model.

- Optimize product fine-tuning by designing and adjusting digital patterns, defining pattern characteristics, such as notches and ensure better pattern piece finishing with seam allowances and corners.

- Quickly generate and send measurement sheets, CAD data and pattern information to subcontractors, purchasing departments and manufacturing plants.
